

Specialty Gas Control Panels

Specialty Gas, Terminal Gas, Generator Back-up Control Panels

Technology for a Better Future

Company Overview

Genstar Technologies Company, Inc. (GENTEC®), founded in 1969, is a global industry leader in the manufacturing of welding apparatus, pressure regulators, and gas control systems.

It is GENTEC®'s mission to provide customers with high quality, value-added products and services that surpass the strictest safety standards. All GENTEC® products are manufactured in an ISO 9001 and ISO 13485 certified facility by our experienced and dedicated workforce, using exquisite craftsmanship in conjunction with computerized automation, stringent quality control, and advanced test equipment.

Additionally, as a total system solution provider, GENTEC® offers technical support, on-site evaluation, and design/implementation. GENTEC® engineers examine all customer requirements in order to develop and recommend the best customer specific solutions.

The company takes great pride in fostering a strong relationship with each and every customer. Today, GENTEC® sells its products through a vast distribution network which extends to thousands of customers worldwide.

SPECIALTY GAS CONTROL PANEL

P3200 Series Single-Bank Specialty Gas Control Panel	02-03
P3300 Series Dual-Bank Specialty Gas Control Panel	04-05
P3400 Series Semi-Automatic Specialty Gas Control Panel	06-07
PD3400 Series Dual-Stage Semi-Automatic Specialty Gas Control Panel	08-09
P3500 Series Semi-Automatic In-Line Repair Specialty Gas Control Panel	10-11
PD3500 Series Dual-stage Semi-automatic In-line Repair Specialty Gas Control Panel	12-13

TERMINAL GAS CONTROL PANEL

P4000 Series Terminal Gas Control Panel	14-15
P4200 Series Terminal Gas Control Panel	16-17
P4400 Series Terminal Gas Control Panel	18-19
P4500 Series Terminal Gas Control Panel	20-21

GENERATOR BACK-UP CONTROL PANEL

BS3100 Series Generator Back-Up Control Panel	22-23
---	-------

ACCESSORIES

Gas Pressure Alarm System, Pressure Switches, Pressure Transducer Gauge	24
Flashback Arrestors, Filters	25
Pigtails, Header Bars	26
Needle Valves, Relief Valves, Ball Valves, Check Valves	27
Diaphragm Valves, Tube Fittings	28
Cylinder Connections	29

■ P3200 SERIES SINGLE-BANK SPECIALTY GAS CONTROL PANEL

P3200 Series Specialty Gas Control Panel is a single-bank control system, designed to provide accurate control of a variety of gases used in research laboratories, laser gas systems, process analyzers, etc. Vent valves can be integrated for purging to ensure maximum purity of gas and minimize contaminants. Available in both stainless steel and brass.

P3200 Series

FEATURES

- ▶ Single-bank gas supply
- ▶ 2" stainless steel pressure gauges
- ▶ All parts are mounted on a single panel for easy installation
- ▶ Inlet valve(s) for changing cylinder(s) included. Outlet and Vent valves are optional
- ▶ Diaphragm valves include an easy-to-read status window (open/close)
- ▶ Integrated safety relief valve to ensure additional safety
- ▶ Diaphragm valve connections are orbital welded to minimize contamination and leakage

Note: Stainless steel models only

SPECIFICATIONS

- ▶ Maximum inlet pressure: 4500 psi
- ▶ Maximum outlet pressure: 50/100/150/250 psi
- ▶ Operating temperature range: -40 °C to 74 °C or -40 °F to 165 °F
- ▶ Leak rate: 2×10^{-8} atm.cc/sec He
- ▶ Cv: 0.14

MATERIALS OF CONSTRUCTION

- ▶ Regulator and valve body: Brass or Stainless Steel
- ▶ Regulator seat*: PTFE, PCTFE
- ▶ Panel: Stainless Steel
- ▶ Panel inlet connections: 1/4" Genlok, 1/4" FSR, 1/2" FSR
- ▶ Panel outlet connections: 1/4" Genlok, 1/4" FSR

* In the event that the selected material of regulator seat is inappropriate for its applications, Gentec shall reserve the right to appoint an alternative seat material.

■ P3300 SERIES DUAL-BANK SPECIALTY GAS CONTROL PANEL

P3300 Series Specialty Gas Control Panel is a dual-bank control system, designed to provide accurate control of a variety of gases used in research laboratories, laser gas systems, process analyzers, etc. Vent valves can be integrated for purging to ensure maximum purity of gas and minimize contaminants. A check valve located in between the inlet pressure gauge and regulator at both ends ensures additional safety for the user(s). Available in both stainless steel and brass.

P3300 Series

FEATURES

- ▶ Dual-bank gas supply
- ▶ 2" stainless steel pressure gauges
- ▶ All parts are mounted on a single panel for easy installation
- ▶ Inlet valve(s) for changing cylinder(s) included. Outlet and Vent valves are optional
- ▶ Diaphragm valves include an easy to read status window (open/close)
- ▶ Integrated safety relief valve to ensure additional safety
- ▶ Diaphragm valve connections are orbital welded to minimize contamination and leakage

Note: Stainless steel models only

SPECIFICATIONS

- ▶ Maximum inlet pressure: 4500 psi
- ▶ Maximum outlet pressure: 25/50/100/150/250 psi
- ▶ Operating temperature range: -40 °C to 74 °C or -40 °F to 165 °F
- ▶ Leak rate: 2×10^{-8} atm.cc/sec He
- ▶ Cv: 0.14

MATERIALS OF CONSTRUCTION

- ▶ Regulator and valve body: Brass or Stainless Steel
- ▶ Regulator seat*: PTFE, PCTFE
- ▶ Panel: Stainless Steel
- ▶ Panel inlet connections: 1/4" Genlok, 1/4" FSR, 1/2" FSR
- ▶ Panel outlet connections: 1/4" Genlok, 1/4" FSR

* In the event that the selected material of regulator seat is inappropriate for its applications, Gentec shall reserve the right to appoint an alternative seat material.

■ P3400 SERIES SEMI-AUTOMATIC SPECIALTY GAS CONTROL PANEL

P3400 Series Specialty Gas Control Panel is a dual bank semi-automatic changeover system, providing a continuous gas supply without interrupting the system during cylinder(s) replacement. When the primary bank is nearly depleted, a changeover will occur, in which the reserve bank will begin to supply gas to the system. The inlet valve on each bank provides the user additional safety while replacing the cylinder(s) on the empty bank before the next changeover occurs. Available in both stainless steel and brass.

P3400 Series

FEATURES

- ▶ Dual-bank gas supply and semi-automatic changeover
- ▶ 2" stainless steel pressure gauges
- ▶ All the components are mounted on a single panel for easy maintenance
- ▶ Inlet valve(s) for changing cylinder(s) included. Outlet and Vent valves are optional
- ▶ Diaphragm valves include an easy-read status window (open/close)
- ▶ Diaphragm valve connections are orbital welded to minimize contamination and leakage

Note: Stainless steel models only

SPECIFICATIONS

- ▶ Maximum inlet pressure: 4500 psi
- ▶ Maximum outlet pressure: 50/100/150/250 psi
- ▶ Operating temperature range: -40 °C to 74 °C or -40 °F to 165 °F

■ PD3400 SERIES DUAL-STAGE SEMI-AUTOMATIC SPECIALTY GAS CONTROL PANEL

PD3400 Series Specialty Gas Control Panel is a dual-bank dual-stage semi-automatic changeover system, providing a continuous gas supply without interrupting the system during cylinder(s) replacement. When the primary bank is nearly depleted, a changeover will occur, in which the reserve bank will begin to supply gas to the system. The inlet valve on each bank provides the user additional safety while replacing the cylinder(s) on the empty bank before the next changeover occurs. The line regulator executes a second stage pressure reduction, providing a consistent outlet pressure and flow. Available in both stainless steel and brass.

PD3400 Series

FEATURES

- ▶ Dual-bank gas supply and semi-automatic changeover
- ▶ Dual stage pressure reduction minimizes pressure and flow fluctuation
- ▶ All the components are mounted on a single panel for easy maintenance
- ▶ Inlet valve(s) for changing cylinder(s) are included. Outlet and Vent valves are optional
- ▶ Diaphragm valve connections are orbital welded to minimize contamination and leakage

Note: Stainless steel models only

SPECIFICATIONS

- ▶ Maximum inlet pressure: 4500 psi
- ▶ Maximum outlet pressure: 50/100/150/250 psi

■ P3500 SERIES SEMI-AUTOMATIC IN-LINE REPAIR SPECIALTY GAS CONTROL PANEL

P3500 Series Specialty Gas Control Panel is a dual-bank semi-automatic changeover system, providing a continuous gas supply without interrupting the system during cylinder(s) replacement. When the primary bank is nearly depleted, a changeover will occur, in which the reserve bank will begin to supply gas to the system. One isolation valve on each bank allows the user to replace the cylinder(s) without discontinuing the gas supply. Each regulator is mounted on individual panels for convenient in-line repair. Available in both stainless steel and brass.

P3500 Series

FEATURES

- ▶ Dual-bank gas supply and semi-automatic changeover
- ▶ 2" stainless steel pressure gauges
- ▶ Isolation valves shut off single bank gas supply for safe maintenance
- ▶ Inlet valve(s) for changing cylinder(s) included. Outlet and Vent valves are optional
- ▶ Diaphragm valves include an easy-read status window (open/close)
- ▶ Diaphragm valve connections are orbital welded to minimize contamination and leakage

Note: Stainless steel models only

SPECIFICATIONS

- ▶ Maximum inlet pressure: 4500 psi
- ▶ Maximum outlet pressure: 25/50/100/150/250 psi
- ▶ Operating temperature range: -40 °C to 74 °C or -40 °F to 165 °F
- ▶ Leak rate: 2×10^{-8} atm.cc/sec He
- ▶ Cv: 0.14

MATERIALS OF CONSTRUCTION

■ PD3500 SERIES DUAL-STAGE SEMI-AUTOMATIC IN-LINE REPAIR SPECIALTY GAS CONTROL PANEL

PD3500 Series Specialty Gas Control Panel is a dual-bank dual-stage semi-automatic in-line repair changeover system, providing a continuous gas supply without interrupting the system during cylinder(s) replacement. When the primary bank is nearly depleted, the reserve bank will begin to supply gas to the system. In addition, an isolation valve on each bank allows the user to replace the cylinder(s) and maintain bank regulator without discontinuing the gas supply. Each regulator is mounted on individual panels for convenient in-line repair. The line regulator executes a second-stage pressure reduction, providing a consistent outlet pressure and flow. Available in both stainless steel and brass.

PD3500 Series

FEATURES

- ▶ Dual-bank gas supply and semi-automatic changeover
- ▶ Dual stage pressure reduction minimizes pressure and flow fluctuation
- ▶ Isolation valves shut off single bank gas supply for safe maintenance
- ▶ Individual panels allow in-line repair of regulator
- ▶ Inlet valve(s) for changing cylinder(s) included. Outlet and Vent valves are optional
- ▶ Diaphragm valve connections are orbital welded to minimize contamination and leakage.

Note: Stainless steel models only

SPECIFICATIONS

- ▶ Maximum inlet pressure: 4500 psi
- ▶ Maximum outlet pressure: 25/50/100/150/250 psi
- ▶ Operating temperature range: -40 °C to 74 °C or -40 °F to 165 °F

■ BS3100 SERIES GENERATOR BACK-UP CONTROL PANEL

BS3100 Series Generator Back-up Control Panel is a hybrid control system, with the gas generator as the primary source of gas supply and the cylinder as the reserve. The automatic changeover provides a continuous gas supply without interrupting the system during generator maintenance. When the pressure of the generator drops below a preset value, the cylinder will begin to supply gas to the system. The line regulator executes a second stage pressure reduction, providing a consistent outlet pressure and flow. This series is available in both stainless steel and brass.

BS3100SL-45-DKP-00

FEATURES

- ▶ Hybrid dual-bank gas supply and automatic changeover
- ▶ Dual-stage pressure reduction to minimizes pressure and flow fluctuation
- ▶ Inlet valves allow the user to isolate either source of gas supply for maintenance
- ▶ The integrated check valve ensures system safety

SPECIFICATIONS

- ▶ Maximum Generator Inlet Pressure: 380 psi
- ▶ Maximum Cylinder Inlet Pressure: 3000 psi
- ▶ Outlet Pressure Range: 0-45 psi
- ▶ Maximum Flow: 60 SLPM
- ▶ Operating Temperature Range: -40°C to 74°C or -40°F to 165°F
- ▶ Leak Rate: 2 x 10⁻⁸ atm.cc/sec He
- ▶ Changeover Pressure: as selected by customer(s)

MATERIALS OF CONSTRUCTION

- ▶ Regulator body: Brass or Stainless Steel
- ▶ Regulator inlet/outlet port: ¼" NPT (F)
- ▶ Cylinder inlet connection: CGA
- ▶ Inlet valve body: Stainless Steel
- ▶ Check valve body: Stainless Steel

■ ACCESSORIES

GAS PRESSURE ALARM SYSTEM

- ▶ Connect with pressure gauge & pressure switch for monitoring of gas(es)
- ▶ LED display 1 to 4 gas status
- ▶ Sound alarm
- ▶ Mute button
- ▶ Connection for distance alarm
- ▶ Voltage: 110VAC/ 220VAC

*For explosion-proof model, add "S" to the model number

SGPA-1-220 *
Monitors 1 Gas

SGPA-2-220 *
Monitors 2 Gases

SGPA-4-220 *
Monitors 4 Gases

PRESSURE SWITCHES

- ▶ Complements gas alarm systems
- ▶ Monitors gas pressure
- ▶ Designed to provide signal to alarm systems
- ▶ Pressure is adjustable

Anti-explosion Model

Standard Model

Model Number	Pressure Range	Max. Inlet Pressure	Connection	Anti-Explosion
GHPS-1	4~50 psi	1000 psi	1/8" NPT(M)	NO
GHPS-2	300~600 psi	2500 psi	1/8" NPT(M)	NO
GHPS-3	100~1500 psi	8000 psi	1/4" NPT(M)	NO
GHPS-4E	2~25 psi	600 psi	1/4" NPT(F)	YES
GHPS-5E	15~75 psi	600 psi	1/4" NPT(F)	YES
GHPS-6E	50~450 psi	2000 psi	1/4" NPT(F)	YES

PRESSURE TRANSDUCER GAUGE

- ▶ Monitors gas pressure
- ▶ Designed to provide signal to alarm systems
- ▶ Range: 0-3000 psi
- ▶ Connection: 1/4" NPT
- ▶ Rear entry

GRE20-3000

■ ACCESSORIES

GENERAL PURPOSE FLASHBACK ARRESTORS

- Designed for use with low pressure manifold piping, preventing flashbacks from low to high pressure piping
